Problem 1. Prove that:

$$
x^{\log _{b} y}=y^{\log _{b} x}
$$

where $b$ and $x$ and $y$ are positive numbers.

Problem 2. Prove that $n^{\alpha}$ is a smooth function for any constant $\alpha \geqslant 0$ and $n$ ranging over $\mathbb{N}$.

Problem 3. What is the value of:

$$
\sum_{j=1}^{\log _{b} n}\left(b^{d} / a\right)^{j}
$$

when $b^{d}=a$ and $n=b^{k}$ ?
