Tasks for this week:

Visit 2 to the EPL to continue learning how to work with surface mount components.

Define the Class Project. Tasks will be divided up among class members. There are more than enough to go around, and small group work is expected. As we make specific assignments, expect to contribute prior knowledge on some tasks and participate in other tasks where your primary function is to learn.

Homework:

Individual homework assignments will be assigned to different groups, with a preliminary report back on Wednesday.

Class Project:

An energy efficient recoverable VHF sonobouy with surface microphone and shallow hydrophone sensors.
