

MICROELECTRONIC CIRCUIT DESIGN

THIRD EDITION

by

RICHARD C. JAEGER and TRAVIS N. BLALOCK

Third Edition Errata - First Printing

Text Corrections

- Page 33 The first answer to the exercise at the bottom of the page should be 9.20 kohms.
- Page 46 The units on the vertical axis of Fig. 2.4 should be cm^{-3} .
- Page 108 Exercise: 2.13 mA, 1.13 mA, -1.27 V
- Page 117 Exercise: 0.912 ms, 19.7°
- Page 118 Exercise at bottom: 0.994 V, 1.07 V
- Page 172 Units in the equation near the bottom of the page should be A/V^2
- Page 178 Third exercise (25.4 μA , 6.52 V)
- Page 182 Exercise answer should be 83.2 μA
- Page 186 Exercise (2.22 μA , 2.96 mV)
- Page 192 Last exercise 127 GHz
- Page 193 Near the end of the first sentence: 10^5 V/cm
- Page 217 Last answer in exercise - 1.07 mA
- Page 223 Exercise answers (b) 0.300 fA, 5.26 aA, -0.305 fA

- Page 229 V_{CE} in second exercise should be 5.44 V
- Page 237 The units on D_n in the exercise are cm^2/s .
- Page 240 First exercise - 1.24 μF
- Page 250 Q-Point: (206 μA , 4.18 V)
- Page 278 Fig. 6.3(a): Remove the labels and arrows indicating NM_L and NM_H .
- Page 302 Exercise; $I_{DD} = 278 \mu\text{A}$
- Page 305 Given Data in Ex. 6.7: 0.20 mW
- Page 306 In the figure, the voltages should be $V_{DSS} = 0.20 \text{ V}$ $V_{DSL} = 3.10 \text{ V}$
- Page 321 Spice Results Table: 11000 132 64.4 0 | 11111 64.6 31.9 31.9
- Page 330 Exercise: 4.47 ns --> 4.97 ns, 3.84 ns --> 2.84 ns
- Page 358 Exercise: 1.27 V
- Page 362 $C = 0.75 \text{ pF}$ in the first exercise. $\tau_p = 2.4 \times (2\text{pF}/0.75\text{pF}) \times (2/1)/(8/1) = 1.6 \text{ ns}$ Also "delay of 1.6 ns" just above the equation. The delay in Fig. 7.13(b) is also 1.6 ns.
- Page 362 In the second exercise: $(W/L)_P = 78.8/1$ $(W/L)_N = 31.5$
- Page 380 Exercise: $P = 12.5 \text{ mW}$
- Page 403 Second exercise: The substrates of the PMOS devices must also be connected to V_{DD} .
- Page 411 Exercise: Fall time = 1.30 ns.
- Page 420 Exercise: $P = 1.0 \text{ mW}$.
- Page 424 Exercise: 3.00 V (3.66 V corresponds to an input of 5 V in Fig. 8.35(b).)
- Page 454 Exercise: $-V_{EE} = -5.2 \text{ V}$
- Page 456 The frequency used in the simulations is 2000 Hz, not 1000 Hz.
- Page 461 Exercise answers 1.66 ns, 6.0 pJ
- Page 464 Second line in Section 9.9.2 should refer to Eq. (5.30)
- Page 466 First exercise: 6.00 --> 3.00
- Page 469 -5.49 mA
- Page 479 What is i_L if $Q_4 \dots$ Answers: 92.3 mA; 9.16 mA; no

- Page 519 262 ohms --> 3.82mS (1/262 ohms)
- Page 520 $(A_v)^2(R_S+R_{in})/R_L$
- Page 531 The numerator coefficient should be 6×10^6 .
- Page 533 The numerator of the transfer function should be multiplied by "s". Answers 25.8 kHz, 25.7 kHz
- Page 549 Example 11.2: The gain of E1 should be negative, -10^9 . Ignore the first two answers in the exercise.
- Page 559 Third example: -18.0, 4.50 V, -92.1 uA
- Page 573 In the figure, voltage gain block E1 is upside down, and its negative input should be connected to the output terminal. Also, Gain = $+10^6$.
- Page 577 Sensitivity = $3Q-1 = 1.12$
- Page 583 $Q = 0.471$
- Page 587 First exercise: $V_Z > 15.6 \text{ V}$
- Page 594 $T_r = 13.0 \text{ us}$
- Page 617 44.2, 36.2, 4.20 (10.5 %), -3.60 (-9.5 %)
- Page 626 Example 12.6: Known information: A = 80 dB
- Page 645 Second denominator: $s + 3.16\pi \times 10^4$
- Page 647 4190 Hz
- Page 656 SPICE Results: $R_{in} = 28.9 \times 10^{12} \text{ ohms}$
- Page 673 First Exercise (1.45 mA, 3.57 V)
- Page 692 The exercise is misplaced in the text and should refer to, and follow, Exercise 13.4. -130 should be -159, -222 should be -176, and 42% should be 10%.
- Page 693 Ignore $\lambda = 0.0133/\text{V}$.
- Page 697 The second exercise should refer to capacitor C_2 , and -145 should be -159.
- Page 700 VAF should be 75 V in the SPICE simulation. Both exercise should refer to R_{iC} , not R_{out} . The exercise answers should be $R_{iC} = 4.85 \text{ Mohms} < 6.28 \text{ Mohms}$. ($R_{out} = 21.9 \text{ kohms}$).
- Page 704 40.0 should be 41.5
- Page 717 Second exercise: $-12.5 \rightarrow -24.4$
- Page 725 The SPICE value of the input resistance should be 14.8 kohms, not 16.0 kohms.

Page 726 Exercise: 2220--2150

Page 726 Example 13.10 - "with feedback bias" should be deleted

Page 734 In the second exercise, 9.5 V should be 4.5 V.

Page 761 Last exercise should refer to Fig.14.2. Answers: 78.1 kohms, 892 kohms

Page 766 In the equation at the top of the page, 116 kohms \rightarrow 1.16 Mohms twice.

Page 767 Exercise - Largest values of v_i ... 0.569 V \rightarrow 0.580 V

Page 772 In Eq. (14.310), $R_4 \rightarrow R_6$

Page 778 Second Exercise: 10.4, 5.04; Third exercise: $8.48 < 10.4 < 176$, $4.11 < 8.48 < 10.5$

Page 796 0.579 uF \rightarrow 6.8 uF, 12.2 nf \rightarrow 0.12 uF, 6.13 nF \rightarrow 0.068 uF; 0.232 uF \rightarrow 2.2 uF, 714 pf \rightarrow 8200 pF, 6.19 nF \rightarrow 0.068 uF

Page 797 795 \rightarrow 820 pF; 0.039 \rightarrow 0.042 uF

Page 803 The emitter arrow should point into the transistor in Fig. 14.33.

Page 808 Eq. (14.88), V_P should be V_{TN} .

Page 811 Second exercise JFET \rightarrow FET; Last exercise: -200, -50.0.

Page 820 Last exercise 1840 should be 1150

Page 842 SPICE results: $V_{CE} - V_{BE} = 7.90$ V and $BF = 116$

Page 851 5.20 \rightarrow 5.30

Page 858 4.9 Gohm \rightarrow 4.8 Gohm

Page 893 9.34 \rightarrow 9.96; 200 uA \rightarrow 189 uA; 10.6 Mohm \rightarrow 10.3 Mohm

Page 903 5.94 Mohm, 1.19 Mohm

Page 906 224 ohm \rightarrow 2.24 kohm

Page 932 1.25 V \rightarrow 1.37 V

Page 938 SPICE Exercise Results: 64.164 uV, 0.520

Page 992 C_2 and C_3 are reversed in Fig. 16.4(c).

Page 995 At the top of the page, the results for ω_{Z2} and ω_{Z3} should be interchanged.

Page 996 First exercise "... if the value of C_2 is reduced..."

Page 999 Second exercise answers: 33.6 ms, 1.47 ms, 14.3 ms, 124 Hz

MCD Errata

Page 1005 Second exercise answers: 24.4 ms, 1.16 ms, 6.66 Hz, 0.550

Pages 1021 & 1030 Examples 16.6 and 16.7: $C_1 = C_2 = 3.9 \text{ uF}$, $C_3 = 0.082 \text{ uF}$

Page 1023 Second exercise: 445 MHz; ignore the comment. Third exercise: -135, 837 kHz, 525 MHz

Page 1031 Second exercise: -29.3, 6.70 MHz, 196 MHz

Page 1033 First exercise: 48.2, 18.7 MHz, 903 MHz

Page 1041 4.20 MHz \rightarrow 6.27 MHz; ignore comment.

Page 1042 22.7 MHz \rightarrow 11.6 MHz

Page 1043 Exercise: 159 kHz, 39.8 kHz; C_1 should be 0.01 uF in Fig. 16.52(b).

Page 1145, Eq. (17.142) The "s" term should be $s[(C_3 + C_{GD})G + g_m C_{GD}]$

Page 1050 Second exercise: 29.6 \rightarrow 23.9, 6.29 \rightarrow 5.07, 296 \rightarrow 239

Page 1052 First exercise: 4.59 MHz, 093.3 kHz, 49.2, -80.2. Ignore the comment at end. Second exercise: 4.59 MHz.

Page 1086 First exercise: +39.1 mS. Second exercise: -252 kohms, -0.01 mS, -71.6 kohms, 605 ohms, 863 ohms.

Page 1110 In the exercise, R_I should be R_D .

Page 1122 Exercise: 27.6° \rightarrow 69.4°

Page 1144 Exercises: 15.9 kHz

Problem Statements

2.48 The second dimension in Fig. P2.48 should be 2 μm , not 3 μm

4.39 Page (c) should refer to Fig. P4.39(b).

4.134 $V_{DS} = -5 \text{ V}$

7.91 Use $V_{DD} = 2.5 \text{ V}$

8.23 $C_{BL} = 500 \text{ fF}$

11.10 & 11.18 V_S should be v_S

11.69 3-kohms should be 3-kohms

13.33 $R_S = 1 \text{ kohms}$ and $R_4 = 1 \text{ kohms}$

14.1 In Fig. 14.1(m), the power supply should be positive: $+V_{DD}$.

14.14 $V_{CC} = 15 \text{ V}$, $-V_{EE} = -15 \text{ V}$

14.69 $C_3 = 2.2 \text{ uF}$.

14.76 Ignore reference to C_3 .

14.115 $C_3 = 2.2 \text{ uF}$

14.122 $C_1 = C_2 = C_3 = 1 \text{ uF}$.

15.96 Ignore the last sentence in the problem statement.

15.203 Problem should refer to Prob. 15.202.

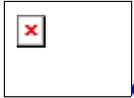

16.58 $V_{CC} = +12 \text{ V}$.

16.65 Problem should refer to Prob. 16.14(e).

16.83 R_L is connected between the collectors of transistors Q_1 and Q_2 .

17.104 The transistor parameters should be $K_p = 1.25 \text{ mA/V}^2$ and $V_{TN} = -4 \text{ V}$.

17.108 $R_S = 820 \text{ ohms}$, and the transistor parameters should be $K_p = 1.25 \text{ mA/V}^2$ and $V_{TN} = -4 \text{ V}$.
