

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

## Null Values

Used to represent missing information

At least two kinds

dne — does not exist

unk — value exists but unknown

<b>PILOT</b>	<b>FLIGHT</b>	<b>DATE</b>	<b>TIME</b>
Cushing	615	50ct	<b>unk</b>
<b>dne</b>	704	60ct	5:50a
Cook	<b>dne</b>	<b>dne</b>	<b>dne</b>

Unit 2, Part 4

David Maier

1

Principles of Databases

## “Does Not Exist” Null

Like adding an additional value to domain of an attribute

So it enlarges the set of possible relation instances

Unit 2, Part 4

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

Issue: dne = dne?

Maybe no: LD → P

PILOT	FLIGHT	DATE	TIME
Cook	dne	dne	dne
Cadiz	dne	dne	dne

Maybe yes: FIRST MI LAST → AGE

FIRST	MI	LAST	AGE
Alex	dne	Cook	37
Alex	dne	Cook	39

Unit 2, Part 4

David Maier

3

Principles of Databases

Unknown Null

More like variables

Can view an instance with **unk** nulls as a set of possible fully-defined instances

PILOT	FLIGHT	DATE	TIME
Cushing	615	5Oct	<b>unk</b>
Cook	704	6Oct	5:50a
Cushing	<b>unk</b>	6Oct	<b>unk</b>

Unit 2, Part 4

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

## Some Possible Instances

PILOT	FLIGHT	DATE	TIME
Cushing	615	50ct	5:00p
Cook	704	60ct	5:50a
Cushing	872	60ct	11:00p

PILOT	FLIGHT	DATE	TIME
Cushing	615	50ct	6:00p
Cook	704	60ct	5:50a
Cushing	615	60ct	6:00p

Unit 2, Part 4

David Maier

5

Principles of Databases

## Also, “No-Information” and “Inconsistent”

$x \sqsubseteq y$ :  $y$  more informative than  $x$

$ni \sqsubseteq unk \sqsubseteq v_i \sqsubseteq inc$

$ni \sqsubseteq dne \sqsubseteq inc$

Unit 2, Part 4

David Maier

6

3

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

## Extend Order to Tuples

Use  $\sqsubseteq$  on each component

```
<Fred, unk, 6>  $\sqsubseteq$  <Fred, 10.25, 6>  
<Fred, unk, 6>  $\sqsubseteq$  <Fred, unk, 6>  
<ni, dne, 6>  $\sqsubseteq$  <unk, inc, 6>  
<ni, dne, 6>  $\sqsubseteq$  <inc, inc, inc>
```

Unit 2, Part 4

David Maier

7

Principles of Databases

## Extending to Relations

Concentrate on unk null

```
ord1(Person Price Amt)  
Fred   unk   6  
Fred   10.25 unk  
Fritz  unk   unk
```

```
ord2(Person Price Amt)  
Fred   11.50 6  
unk    10.25 7
```

```
ord3(Person Price Amt)  
Fred   11.50 6  
Fred   10.25 7  
Fritz  12.25 7
```

Unit 2, Part 4

David Maier

8

## CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

### What Does a Tuple Mean

For partial relations  $r, q$ , what should  $r \sqsubseteq q$  require?

For tuple  $t$  in  $r$

- exactly one  $s$  in  $q$  with  $t \sqsubseteq s$ ?
- at least one  $s$  in  $q$  with  $t \sqsubseteq s$ ?

For tuples  $t_1, t_2$  in  $r$ , can there be a single  $s$  in  $q$  with  $t_1 \sqsubseteq s$  and  $t_2 \sqsubseteq s$ ?

Can there be  $s$  in  $q$  where  $t \sqsubseteq s$  for all  $t$  in  $r$ ? (closed world assumption)

Unit 2, Part 4

David Maier

9

Principles of Databases

### Book's Definition

"Fill in the blanks"

$r \sqsubseteq q$  means there is a total, onto map  $\theta$  from  $r$  to  $q$  where for every tuple  $t$  in  $r$

$$t \sqsubseteq \theta(t)$$

Unit 2, Part 4

David Maier

10

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

## Examples

ord1 ( <u>Person</u> Price Amt)			ord3 ( <u>Person</u> Price Amt)		
Fred	unk	6	→	Fred	11.50 6
Fred	10.25	unk	→	Fred	10.25 7
Fritz	unk	unk	→	Fritz	12.25 7

θ

ord1 ( <u>Person</u> Price Amt)			ord4 ( <u>Person</u> Price Amt)		
Fred	unk	6	→	Fred	10.25 6
Fred	10.25	unk	→	Fritz	12.25 unk
Fritz	unk	unk	→		

θ

David Maier

11

Principles of Databases

## But Consider

ord2 ( <u>Person</u> Price Amt)			ord3 ( <u>Person</u> Price Amt)		
Fred	11.50	6	→	Fred	11.50 6
unk	10.25	7	→	Fred	10.25 7
		?	→	Fritz	12.25 7

θ

Unit 2, Part 4

David Maier

12

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

## Possible Worlds

View a partial relation as specifying a set of possible worlds

$$\text{POSS}(r) = \{q \mid r \sqsubseteq q \text{ and } q \text{ is fully defined}\}$$

Can include constraints  $C$

$$\text{POSS}(r, C) = \{q \mid q \text{ in } \text{POSS}(r) \text{ and } q \text{ in } \text{SAT}(C)\}$$

Unit 2, Part 4

David Maier

13

Principles of Databases

## What Happens if We Have Constraints?

### Recall

PILOT	FLIGHT	DATE	TIME
Cushing	615	5Oct	unk
Cook	704	6Oct	5:50a
Cushing	unk	6Oct	unk

Unit 2, Part 4

David Maier

14

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

## Not All Satisfy the FDs

$$F = \{L \rightarrow T, PDT \rightarrow L, LD \rightarrow P\}$$

PILOT	FLIGHT	DATE	TIME
Cushing	615	5Oct	
Cook	704	6Oct	5:50a
Cushing		6Oct	

PILOT	FLIGHT	DATE	TIME
Cushing	615	5Oct	
Cook	704	6Oct	5:50a
Cushing		6Oct	

Unit 2, Part 4

David Maier

15

Principles of Databases

## Use FD-Chase on Instances with Unknowns

**r**

PILOT	FLIGHT	DATE	TIME
Cushing	704	5Oct	unk
Cook	704	6Oct	5:50a
Cushing	unk	6Oct	unk

**r'**

PILOT	FLIGHT	DATE	TIME
Cushing	704	5Oct	5:50a
Cook	704	6Oct	5:50a
Cushing	unk	6Oct	unk

$$POSS(r, F) = POSS(r', F)$$

Unit 2, Part 4

David Maier

16

## CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

### Querying Relations with Unknowns

Let  $r$  be a relation with unknowns, and  
 $Q$  a query on full relations

Would like  $Q'$  on partial relations  
 $Q'(r)$  represents  $\{Q(q) \mid q \text{ in } POSS(r)\}$

When  $r$  is fully defined, would like  
 $Q'(r)$  and  $Q(r)$  to agree. (Faithful)

Unit 2, Part 4

David Maier

17

Principles of Databases

### Relational Algebra

One approach: Multi-relation

Let  $p_{op}$  be partial-relation version of  
operator  $op$   
 $p_{\pi}$  and  $\pi$

$POSS(p_{op}(r)) = \{op(q) \mid q \text{ in } POSS(r)\}$

Unit 2, Part 4

David Maier

18

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

## Not Always

$\sigma_{L=872}(r)$

$r \sqsubseteq r1$

PILOT	FLIGHT	DATE	TIME
Cushing	615	5Oct	5:00p
Cook	704	6Oct	5:50a
Cushing	872	6Oct	11:00p

ans(r1)

PILOT	FLIGHT	DATE	TIME
Cushing	872	6Oct	11:00p

Unit 2, Part 4

David Maier

21

Principles of Databases

## Not Always

$\sigma_{L=872}(r)$

$r \sqsubseteq r2$

PILOT	FLIGHT	DATE	TIME
Cushing	615	5Oct	5:00p
Cook	704	6Oct	5:50a
Cushing	615	6Oct	5:00p

ans(r2)

PILOT	FLIGHT	DATE	TIME
$\emptyset$			

Unit 2, Part 4

David Maier

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

## Projection

$\rho\pi_Y(r) = \{t[Y] \mid t \text{ in } r\}$   
ord1 (Person Price Amt)  
Fred unk 6  
Fred 10.25 unk  
Fritz unk unk

$\rho\pi_{\text{Person Price}}(\text{ord1}) =$   
ans (Person Price)  
Fred unk  
Fred 10.25  
Fritz unk

Unit 2, Part 4

David Maier

25

Principles of Databases

## Projection 2

POSS(ord1) includes  
(Person Price Amt)  
Fred 11.50 6  
Fred 10.25 7  
Fritz 12.25 7

POSS( $\rho\pi_{\text{Person Price}}(\text{ord1})$ ) includes  
(Person Price)  
Fred 11.50  
Fred 10.25  
Fritz 12.25

Common part will be <Fred 10.25>

Unit 2, Part 4

David Maier

26

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

## Union

$r1 \text{ pU } r2 = \{t \mid t \text{ in } r1 \text{ or } t \text{ in } r2\}$   
 $\text{ord1 pU ord2}$

ans(Person Price Amt)

Fred	unk	6
Fred	10.25	unk
Fritz	unk	unk
-----		
Fred	11.50	6
unk	10.25	7

Unit 2, Part 4

David Maier

27

Principles of Databases

## What if We Let Intersection Be the Result?

Might only want tuples that are in  
every possible answer

$\text{pop}(r) = \{t \mid t \text{ in } \text{op}(q) \text{ for every } q \text{ in } \text{POSS}(r)\}$

For example,  $r$

PILOT	FLIGHT	DATE	TIME
Cushing	615	50ct	unk
Cook	704	60ct	5:50a
Cushing	unk	60ct	unk

$\text{p}\pi_{\text{PL}}(r)$

PILOT	FLIGHT
Cushing	615
Cook	704

Unit 2, Part 4

David Maier

28

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

## But Note

$r$

PILOT	FLIGHT	DATE	TIME
Cushing	615	50ct	unk
Cook	704	60ct	5:50a
Cushing	unk	60ct	unk

$$p\sigma_{P=Cushing}(r) = \emptyset$$

$$p\pi_{LD}(p\sigma_{P=Cushing}(r)) =$$

FLIGHT	DATE
615	50ct

Unit 2, Part 4

David Maier

29

Principles of Databases

## “Could Be” Semantics

*Possibility Preserving*: combination of all possible results

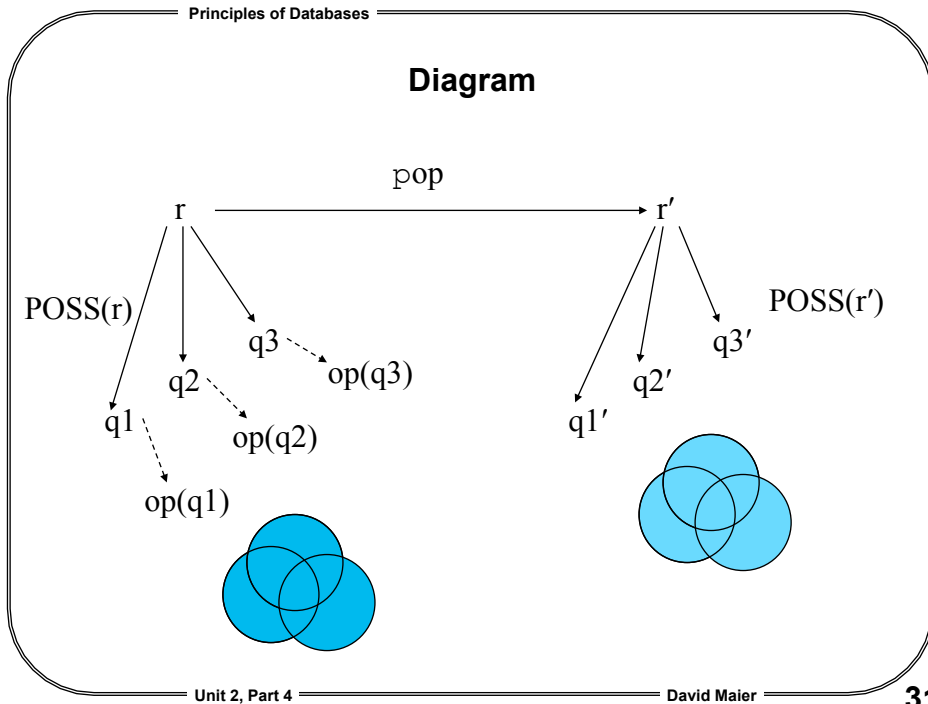

$$\cup\{q \mid q \text{ in } POSS(p\sigma(r))\} = \cup\{op(q') \mid q' \text{ in } POSS(r)\}$$

Unit 2, Part 4

David Maier

30

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

## Selection Conditions

$t.B = 6$

<u>A</u>	<u>B</u>	
<Fred 6>		true
<Fred 4>		false
<Fred unk>		maybe

3-valued logic

<u>or</u>	<u>T</u>	<u>F</u>	<u>M</u>
T	T	T	T
F	T	F	M
M	T	M	M

Unit 2, Part 4 David Maier 32

# CS 589 Principles of Databases, Unit 2, Part 4

Principles of Databases

## Example

	<u>A</u>	<u>B</u>
t1	<Fred	unk>
t2	<Fritz	unk>

$t.A = \text{Fritz} \text{ or } t.B = 6$

t1	F	or	M	=	M
t2	T	or	M	=	T

Unit 2, Part 4

David Maier

33

Principles of Databases

## But

t1	<Fred	unk>
----	-------	------

$t.B < 6 \text{ or } t.B \geq 6$

t1	M	or	M	=	M
----	---	----	---	---	---

But it would be T for any value for unk

Unit 2, Part 4
