

Final Project

CS / SySc 346U

For the final project, each student will create his or her own simulation in Netlogo (or extend an existing simulation), design and perform experiments using this simulation, and read at least two published papers related to the topic of the simulation. Each student will write a paper (about 10-20 pages, double-spaced, including figures and references) describing the simulation, related papers, and experimental results.

Important dates:

Monday, November 11, 2013: Project abstracts due (1 or 2 paragraph summary of project, with reading list of at least two papers).

Wednesday, December 11, 2013: Project (final paper and NetLogo model) due by 5pm.
