Review of Melanie Mitchell’s Summary
Review by Melanie Mitchell

This is a good, well-written summary. Here are a few suggestions for improvement.

When you say “For the sake of simplicity in this system, it is assumed that all passwords are exactly 8 characters in length”, it sounds like you are referring to Quinlan’s C4.5 system, although I know you are referring to Bergadnao et al.’s system. Make this clearer.

In the fourth paragraph, you misspell “contains”.

You never define “exceptions”. (E.g., “the ratio of the size of the resulting tree plus ‘exceptions’.”)

The sentence in the fifth paragraph starting with “They were concerned about this...” is a bit run-on. Can you shorten it?
