

## General rules and modus operandi for the projects

- All questions, remarks and suggestions should be addressed on [lukac242@netscape.net](mailto:lukac242@netscape.net) I will answer in general in less than one hour
- All results from a GA should be averaged over 20 runs
- For all projects a Log-book is required, this should contain all you experimental descriptions of your projects, arguments for and against what you have been doing. If you do not write something in the final report you should be sure that it is at least in your Log-book. The Log-book will be part of the final evaluation.
- 

### For projects:

- All results from a GA should be averaged over 20 runs
- Exceptionally good or bad results should be denoted apart
- All steps during exploration and experimentation should be precisely written down in a log book
- Report immediately if the software does not work properly or if you have any troubles using it.

### Software:

- A console interface
  - Input: file
  - Output: file
- All commands through the input file
- Available Monday on
  - prof. Perkowski home page
  - Download the zipped package
    - Contents: exe file, source file, documentation and user's manual
