THE PRECEDING PAGE

According to the survey conducted by the National Women’s Organization, women are more likely to experience workplace harassment and discrimination than men. The study found that 45% of women reported having experienced some form of harassment or discrimination over the past year, compared to 30% of men.

Women in Other Professions

Despite the progress made in recent years, women continue to face barriers in accessing certain professions. The survey also revealed that women are significantly less likely to hold leadership positions in the corporate world. Only 15% of top-level executives are women, compared to 20% of men.

Childcare and Work-Life Balance

The survey also highlighted the challenges faced by working mothers, particularly in balancing their careers with their family responsibilities. The lack of affordable and accessible childcare services remains a significant barrier for women seeking to advance in their careers.

Conclusion

The survey underscores the need for continued efforts to promote gender equality and ensure equal opportunities for women in all aspects of society. It also calls for more support systems and policies to help women manage their work-life balance effectively.
2. Answer the question: What is the main idea of the passage?

The main idea of the passage is that women are underrepresented in leadership positions in science. The author discusses the factors contributing to this underrepresentation, such as societal expectations and gender biases, and suggests strategies to address the issue. The passage also highlights the importance of diversity in leadership roles for innovation and progress.
